Reduce your vulnerabilities backlog from months to days with Rezilion, to comply with new TSA regulations

The recent threats on critical infrastructures that culminated in the colonial pipeline breach earlier this year have prompted TSA to issue mandates for the operators to improve their cyber-security posture and resilience. Specifically, pipeline operators are now obligated to identify threats & vulnerabilities, drastically shorten their patching windows in their IT environments and practically eliminate their vulnerability backlog. With these new mandates, unpatched vulnerabilities have now become an acute compliance problem.

The large and growing backlog of unpatched security vulnerabilities is creating a significant risk to critical infrastructure companies, especially the pipeline operators. With hundreds of thousands of unpatched vulnerabilities, closing this gap in a quick and effective manner becomes impossible. This large unpatched backlog of vulnerabilities has exposed these organizations to threats from hackers who can develop toolkits to exploit vulnerabilities in less than 48 hrs after they're disclosed and become publicly known, while causing the organizations to be out of compliance with governing bodies.

Using the Rezilion platform, leading pipeline operators can eliminate 85% of their patching backlog and reduce their time-to-fix from years to days.

Benefits of the Rezilion platform for pipeline operators

FOCUS ONLY ON VULNERABILITIES THAT MATTER
Validate which vulnerabilities are actually exploitable in your environment. By focusing only on exploitable vulnerabilities operators are able to reduce patching efforts by 85% as well as respond quickly to threats.

RECOMMENDED REMEDIATION ACTIONS
Receive automated recommendations for the most efficient paths to remediation based on aggregated and validated data, to make informed decisions and respond faster–further reducing exposure windows.

EFFECTIVE REPORTING Aggregate scan data from any type or number of scanning tools to accurately report on the effectiveness of your vulnerability management program, measuring progress and time-to-fix by business unit and environment.

EASY DEPLOYMENT, SEAMLESS INTEGRATION
Rezilion can be deployed in minutes. It integrates with your existing environment and security tools without disrupting any workflows for a seamless continuous operation.
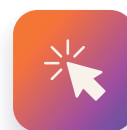

Try Rezilion Today.
