

# Vulnerability Remediation with Rezilion

WITH REZILION'S SOFTWARE ATTACK SURFACE MANAGEMENT PLATFORM you can distill thousands of vulnerabilities to the handful that are exploitable and require attention. Eliminate the guesswork and reduce risk fast with actionable remediation recommendations and automated patching in seconds and secure the software you deliver to customers.

## Why Use Rezilion

1. **Prioritize** to fix what matters and not every single vulnerability with granular runtime analysis
2. **Know** the lowest-cost fix for each vulnerability
3. **Understand** operational risk before applying a patch with Rezilion's Next Generation Vulnerability Database (NGVDB)
4. **Create** tickets, get alerts, and track remediation with integrations to your existing toolsets
5. **Automated** remediation workflows in CI and production.

## Key Features

- ✓ **Full-stack, full-cycle view** of all your vulnerabilities
- ✓ **Reduce** your software attack surface by up to 85%
- ✓ **Reduce** time to patch with knowledge on what and how to fix
- ✓ **Enforce** your security policies throughout the development life cycle
- ✓ **Create** harmony between teams by automating the where, why, and how of patching work

## How the Platform Works

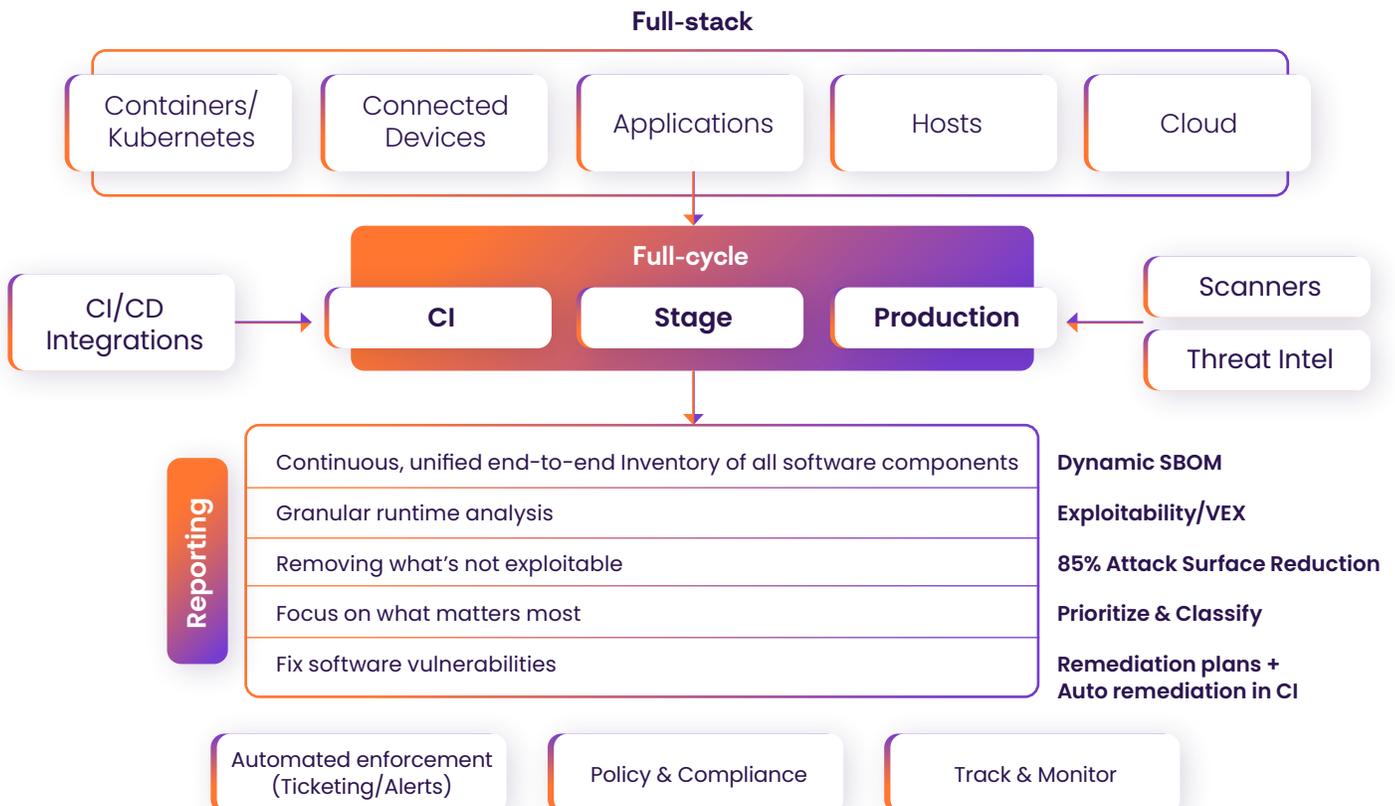

Rezilion platform secures your software in three easy steps:

- ✓ **Discover:** Rezilion’s Dynamic SBOM discovers and identifies all software components on any layer of the software stack and at any stage of the Software Development Life Cycle (SDLC).
- ✓ **Prioritize:** Using continuous granular runtime analysis the platform detects vulnerable software components and determines their exploitability – filtering out 85% of vulnerabilities.
- ✓ **Remediate:** Rezilion then automatically mitigates exploitable vulnerabilities across the SDLC from CI to production, reducing vulnerability backlogs and remediation timelines from months to hours.

With this holistic software attack surface management approach Rezilion customers can:

- ✓ **Save** countless hours they would otherwise spend on fixing all of the vulnerabilities including ones that do not pose a risk
- ✓ **Shorten** attack windows
- ✓ **Give** DevOps teams time back to build
- ✓ **Improve** their time to market by releasing products quickly and securely

## Rezilion's Software Attack Surface Management Platform

## Jobs to be Done

1. **Manage** all your scan results in one place by aggregating all your vulnerabilities across a range of environments and scanner tools.
2. **Reduce** false positives and focus on what matters most by removing unexploitable vulnerabilities and not immediately worrying about remediating vulnerabilities that pose no risk.
3. **Set** your organization's thresholds of acceptable risk to meet security and compliance requirements.
4. **Know** what is the closest version upgrade that would remediate the vulnerability with minimal functional impact using Rezilion's Next Generation Vulnerability Database (NGVDB).
5. **Create** smart remediation plans by instantly grouping thousands of vulnerabilities into a handful of low-impact software updates.
6. **Automate** the next remediation steps in CI and production to speed up remediation and save time.
7. **Track** your team's remediation efforts and SLAs to ensure that you are not out of compliance.
8. **Automatically** resolve issues that have been fixed to release developer bandwidth back to innovation work.

### About Rezilion

Rezilion's platform automatically secures the software you deliver to customers. Rezilion's continuous runtime analysis detects vulnerable software components on any layer of the software stack and determines their exploitability, filtering out up to 95% of identified vulnerabilities. Rezilion then automatically mitigates exploitable vulnerabilities across the SDLC, reducing vulnerability backlogs and remediation timelines from months to hours, while giving DevOps teams time back to build.
