

Software Vulnerability Management

WITH REZILION'S SOFTWARE SUPPLY CHAIN SECURITY PLATFORM you can automatically identify, prioritize, and auto-remediate 3rd-party and open-source software risks from development to production across the entire technology stack.

Not all software vulnerabilities are exploitable. Know what, when, and how to fix and address risk efficiently and secure the software you deliver to customers.

Why Use Rezilion

1. **Continuous** full-stack, full-cycle visibility into all of your software components
2. **Know** what vulnerabilities are associated with each component and its exploitability
3. **Reduce** your attack surface by up to 85% by removing components not loaded to memory
4. **Prioritize** and automatically remediate your software vulnerabilities by focusing on those that pose the greatest risk

Key Features

- ✓ **Get** a unified view of all your software vulnerabilities — down to the file and class level
- ✓ **Seamlessly** integrate your own vulnerability scanner or use Rezilion's out-of-the-box SCA solution
- ✓ **Use** granular runtime analysis to validate the true exploitability of scan results
- ✓ **Filter** out the noise of false positives and prioritize what matters most
- ✓ **Integrate** with your existing CI/CD, staging, and production workflows
- ✓ **Comply** with your organization's security policies
- ✓ **Always** know your vulnerability state with continuous monitoring and tracking

How the Platform Works

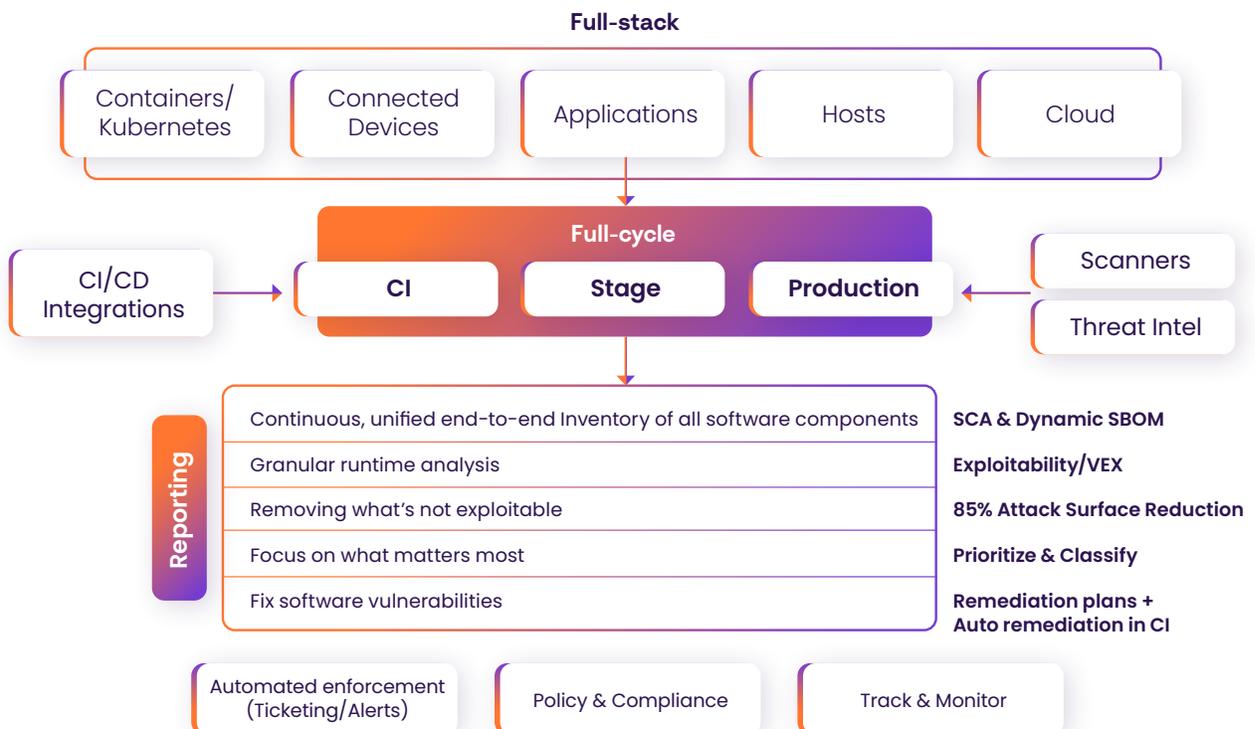

Rezilion platform secures your software in four easy steps:

- ✓ **Discover:** Create an instant inventory of all the software components in your environment with Rezilion's SCA and Dynamic SBOM
- ✓ **Aggregate:** Enrich and consolidate scan results from multiple tools in a single dashboard for a complete view of your software attack surface
- ✓ **Prioritize:** Using continuous granular runtime analysis the platform detects vulnerable software components and determines their exploitability – filtering out vulnerabilities that pose no risk (up to 85%)
- ✓ **Remediate:** Cluster vulnerabilities to eliminate multiple problems at once and automatically execute remediation work to save teams time

With this holistic software supply chain security approach, Rezilion customers can:

- ✓ **Save** countless hours they would otherwise spend on fixing all of the vulnerabilities, including ones that do not pose a risk
- ✓ **Shorten** attack windows
- ✓ **Give** DevOps teams time back to build
- ✓ **Improve** their time to market by releasing products quickly and securely

Rezilion's Software Supply Chain Security Platform

Jobs to be Done

1. **Eliminate** any coverage gaps with continuous visibility into software assets and associated vulnerabilities across the entire stack.
2. **Focus** on what really matters by automatically filtering out vulnerabilities that are not loaded to memory, and therefore not exploitable.
3. **Automatically** communicate to IT and infrastructure teams what needs to be fixed and how with smart and auto-remediation to avoid any guesswork.
4. **Track** your organization's time-to-fix and remediation SLAs to ensure that you are not out of compliance.
5. **Get** continuous updates on the status of your security posture and attack surface with actionable insights.

About Rezilion

Rezilion's software supply chain security platform automatically assures that the software you use and deliver is free of risk. Rezilion detects third-party software components on any layer of the software stack and understands the actual risk they carry, filtering out up to 95% of identified vulnerabilities. Rezilion then automatically mitigates exploitable risk across the SDLC, reducing vulnerability backlogs and remediation timelines from months to hours, while giving DevOps teams time back to build.
